

The Neonatal Transfer Service

The ambulance that comes to collect your baby will be specially designed and equipped with the necessary specialist equipment to provide intensive care for sick newborn babies.

Your baby will be placed in an incubator to keep it warm, will have its heart rate, breathing and blood pressure monitored and may require equipment to help with breathing.

This will ensure a safe transfer to the unit that will care for your baby.

The transport team will all be specialists in the care of sick, newborn babies and will include a doctor or an advanced neonatal nurse practitioner, a senior neonatal nurse and a Paramedic. They will all have undertaken specialist transport training.
